FWDP 1000 – Web Development 1

Assignment #5

<u>Due Date</u>: End of day. Have the instructor look at the files or upload today's folder to the Learning Hub.

<u>Marks</u>: 10 points. See the rubric in the Learning Hub for details.

Tasks

1. Open product-1.html and product-1.css in your code editor.
    a. These are already in your "day-07" folder.
2. Download the example screenshots and video demo to replicate the design and functionality.
    a. There are two screenshots (mobile and desktop) and one video demo showing both mobile and desktop.
    b. Complete the mobile styling before moving on to the desktop styling.
    c. You do not need to edit the HTML file to complete the assignment, only the CSS file.
3. On mobile, the navigation should stay attached to the bottom of the viewport.
4. On desktop, the navigation should be inside of the header and the header should stay attached to the top of the viewport.
5. On desktop, the sidebar shown in the screenshot (title, price, link) should attach to the bottom of the header as the screen scrolls, so it is always in view.
    a. Hint: Check your solution for the sidebar on a large screen or zoom out in your browser.
6. On desktop, create the photo collage. When hovering the mouse over an image, bring it above the other images. (This section does not need to be pixel perfect to match mine.)
7. Each of these positions will be used at least once in your CSS:
    a. relative, absolute, fixed, sticky
8. Float will only be used once in your CSS.
